

# FR-AM1 ECMO Transport System

Always innovating Forza Rescue introduces the ECMO transport system. The device for extracorporeal membrane oxygenation is an equipment used for highly complex transfers, so it must be transported with great care and safety.

With this in mind, Forza Rescue has developed together with the most experienced paramedics in the area, an extremely resistant and reliable transport, built in carbon steel with a chrome finish, has elastic straps for equipment fastening, in addition to a set of rods for up to 6 infusion pumps, oxygenation membrane, console base and other ECMO parts and is available in a foldable version for ambulance and fixed version for aeromedical transfer.

## FEATURES:

- Carbon steel frame.
- High quality chrome finish.
- Set of rods for accessories fastening.
- Foldable system for the ambulance version.
- Fixed system for aeromedical version.
- Easy cleaning and asepsis.
- Load capacity: 40Kg.
